

**Remember when you were
young and
you got your first bike.
You had to use training
wheels to learn to ride it.**

That is how we think you should learn to use the computer the same way.

You should start with a very simple computer.

*Once you feel like you have mastered this simple computer
you pack it up, bring it in and trade it for a more complex computer.*

In no time at all, you will be using the latest system.

*Emailing friends, surfing the web, instant messaging
and burning compact discs*

It all begins with a single purchase.

We help you with everything

From installing software to

cleaning your system for viruses.

That is correct, if you ever have a question or a problem with the computer.

Bring it in, and our knowledgeable staff will help you solve your problem.

*We are here to help. Like I said we want you to learn to use a
computer like riding a bike.*

With a lot of encouragement and education on how to use it.
